## PROJECTS

---

### Symbol Art Vault

GitHub [🔗](#) | Live [🔗](#)

A Fullstack Web App for *Phantasy Star Online 2* (PSO2) players who want to share their Symbol Arts with friends online.

- Crafted front-end using **React** and styled components with **Tailwind CSS / DaisyUI**.
- Ensured **Mobile Responsiveness** by utilizing Media Breakpoints.
- Directed routes using **React Router**, allowing sharable links to be rendered via **Pug** templates.
- Manage posts with **PostgreSQL**, with a custom **API** built using **Express** and **Node.js**.
- Persist files with an **AWS S3** Storage Bucket, which is interfaced using **Multer** and **Multer S3**.
- Verified user sessions and authorization via **JSON Web Tokens** and secured with **Argon2**.

### YGO Like or Strike

GitHub [🔗](#) | Live [🔗](#)

A Web App for Yu-Gi-Oh! players who want to rate random cards (think Tinder for Yu-Gi-Oh! Cards).

- Users are given a random *Yu-Gi-Oh!* card that they can either *Like* or *Dislike*.
- Front End Stack is framework-less and uses icons and animations provided via **CDN** links.
- Pulls *Yu-Gi-Oh!* trading card data from a **Public API** utilizing **AJAX**.
- Displays card art and user's ratings with a **Responsive UI** designed and wireframed in **Figma**.
- Constructed layout with **Flexbox** and ensured responsiveness through **media-queries**.
- Organized user card ratings with **Local Storage** and **JSON**.
